Comparison Between Next.js and React.js

This document concisely compares Next.js and React.js in terms of rendering, routing, SEO, performance, deployment, and API routes, helping developers choose the right tool for their needs.

Choosing between Next.js and React.js

Rendering Mode

- **React.js:** A library focused on client-side rendering (CSR).
- **Next.js:** Offers server-side rendering (SSR), static site generation (SSG), and client-side rendering (CSR).

Which framework to choose?

React.js

Focused on CSR

Next.js

Supports SSR, SSG, CSR

Routing

- **React.js:** Relies on external libraries like react-router for routing.
- **Next.js:** Features a built-in file-based routing system, simplifying navigation.

React.js

Flexible but requires
libraries

Next.js

Simplified routing built-in

SEO

- **React.js:** Less optimized for SEO since CSR delays the initial page load.
- **Next.js:** SEO-friendly due to SSR and SSG, enabling faster page loads and easier indexing.

React.js

Less SEO optimized

Next.js

SEO-friendly and fast

Performance

- **React.js:** Performance depends on CSR, which may lead to slower load times.
- **Next.js:** Utilizes features like code-splitting, pre-fetching, and SSR, enhancing performance.

React.js

Slower load times

Next.js

Enhanced performance

Deployment

- **React.js:** Requires additional setup for optimal deployment.
- **Next.js:** Designed for easy deployment with platforms like Vercel.

API Routes

- **React.js:** Does not support serverless functions or APIs directly.
- **Next.js:** Provides API routes, allowing for serverless functions within the same app.

Comparing serverless functions and API support in React.js and Next.js.
